Local Administrator Access Policy

1. Purpose

This document defines Swiss TPH's policy regarding local administrator rights to Swiss TPH owned computers (laptops or desktops). The Institute is committed to providing members of Swiss TPH community with reliable technology in stable operating condition while appropriately addressing the Institutes needs and maintaining Institute system integrity, data security and license compliance.

2. Scope

The Administrator Access Policy applies to all users who are granted "Administrator" access on Swiss TPH owned computers.

3. Policy

By default all Swiss TPH members are assigned Standard user access level rights on their individual computers. Exceptions may be granted to institute members who require Administrator level access to perform job related tasks. Individuals may request local administrator level access through their line manager and their secretarial office and sign this Local Administrator Access Policy (provided by Informatics), acknowledging that they have read the documents mentioned in 'Related Documents' above, like the Manual for Employees of the Swiss TPH, especially the Appendix 10: 'Terms of Use for Intranet, Internet and Email' and Appendix 12: 'Rules for working with data and Administrator Access policy' and this policy. The use of these rights and the level of access to the computer are to be in accordance with the mentioned documents.

4. Guidelines

For normal work the Standard user access level account has to be used.

The Local Administrator account may only be used for things which cannot be done with the Standard user access level account. This especially excludes browsing the WWW and mailing. In general individuals have to avoid any security risks and ensure license compliance.

Swiss TPH computers are institute property and are intended for institute business. Individuals should only install software related to institute business. Individuals should not install software that may damage files or expose Swiss TPH's network to virus attacks and malicious coding. Individuals should refrain from installing software which may monopolize local processor power, resulting in noticeable system slowdown or degradation of performance. Individuals should not install applications that may establish network share protocols which result in an increase in bandwidth utilization as this may cause network congestion and degradation of network performance across wide areas of the institute.

Individuals should not download or install applications (software) that are illegal or not licensed on institute owned equipment. All software has to be licensed to Swiss TPH according to applicable Swiss law. Licenses in the name of an individual may not be used. Use of the software has to be in accordance with the license agreement.

Individuals should not remove any security measures, especially the installed virus scanner.

Individuals who download or install applications (software), other than those included in the standard configuration for all institute computers, are responsible for retaining documentation of appropriate licenses.

Individuals are also responsible for re-installing this non-standard software if necessary.

5. Support

Non-standard software will be removed as part of a normal repair process if necessary to restore system functionality.

In the event of computer or network performance issues associated with a computer enabled with administrator level access, Informatics will only restore the computer to the standard configuration for all institute computers.

The occurrence of repeated instances of OS integrity problems may result in the removal of administrator level access in order to prevent continued challenges in supporting the computer.

There will be no express support if there are any inconsistencies due to use of local admin rights.

6. Sanctions in the case of misuse

As mentioned in the 'Terms of Use for Intranet, Internet and Email' the Swiss TPH can impose sanctions against the user in a proven case of misuse; these may include a reprimand, warning or dismissal (if necessary, without notice).

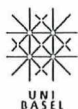

The ILK is responsible for imposing sanctions.

In the case of violations of specific rules or legal requirements, the Swiss TPH reserves the right to take other legal steps against the offending person(s).

7. Definitions

Administrator access level allows the user to have complete and unrestricted access to the computer. This includes the ability to install any hardware or software, edit the registry, manage the default access accounts and change file level permissions. Manipulating these may cause serious stability issues with the affected system. Local administrator user accounts are named **la_[username]**.

Standard user access level allows most administrative powers with some restrictions. Installation of software or hardware that makes changes to the underlying operating system will require the assistance of Informatics. Standard user access level will generally assure the highest level of stability for a computer.

A sound reason for the request for Local Administrator Access To download non-standard software for my PhD in malaria modeling.	
As long as I'm having access with my computer to Swiss TPH's network, I commit to the following points: ☒ To comply with all Swiss TPH rules and guidelines especially this policy and the Swiss TPH „Guidance on user account rights for Swiss TPH hardware“ and the „Reglement über den Umgang mit universitären Informatikmitteln“ of the University of Basel. ☒ Never to pass my user account or my password to another user, not even for a short period of time.	
The IT soft- and hardware of the Swiss TPH may only be used for purposes of teaching, research and services supported by the Swiss TPH. In cases of misuse the Swiss TPH reserves the right to block the registered computers access to the Swiss TPH network. The Swiss TPH retains the right to check the use of its network and to record and to supervise its use, including the use of the Internet. The signing applicant is responsible for all actions occurring on the Swiss TPH/UNIBAS network using his/her registered account. The Informatics unit of the Swiss TPH can revoke already approved derogations, if this is necessary due to external circumstances or newly appeared hazards.
