Lecturer's email address: riana.paola@unibas.ch

This course might differ from other writing courses because you not only learn to write, but also to review your own and others' writing. **Reviewing** is a major step in improving one's own writing and, therefore, part of the writing training in this course. Assessing writing, expressing one's views about it in writing, and making suggestions for improvement all form part of scientific writing while contributing to the enhancement of one's

own writing. Furthermore, it is crucial to train reviewing skills that are central to collaborative writing, which is standard practice in publishing research. Another skill that is also trained by reviewing other writers' work is managing time and interpersonal relationships when reviewing and dealing with reviewers.

In this course, students review at least four of each other's (peer-reviewed) assignments before uploading them to ADAM (and/or to Padlet, as instructed). **Note that participating in the review process forms part of the requirements for the course, in addition to attending classes and manuscript clinics, as well as submitting the assignments on time.** Consequently, **late submissions are not reviewed and do not receive comments from the course tutor.** In case your assignment reviewer is late in uploading their review, contact the reviewer directly and work out an acceptable solution. If, after that, you encounter any difficulties with meeting a deadline, or if your reviewer is late in submitting their review, you can contact the tutor.

1.1 Assignment naming conventions for reviewed assignments

Please follow these instructions and naming conventions carefully when you upload your assignments and reviews to ADAM.

All assignments are uploaded in **WORD format** (not PDF).

When you **review** assignments, use '**Track changes**' under the 'Review' functions on WORD.

The **first version** of each reviewed assignment is named: Xsurname name first version (where X is the number of the assignment, for example **3Brown Anne first version** for assignment 3). It is uploaded into the Assignment X First draft folder.

The **reviewed version** of each reviewed assignment: Xsurname name reviewed by YOUR NAME. It is uploaded into the Assignment X reviewed draft folder.

The **final version** of the reviewed assignment: Xsurname name final version. It is uploaded into the Assignment X final draft folder.

The first two assignments in this course that are not peer-reviewed are uploaded to the course Padlet and/or to the appropriate folders on ADAM.

The next pages continue with further instructions, the peer review schedule as well as a summary of the assignments for this course.

1.2 Turnitin plagiarism check instructions and use of Artificial Intelligence

Turnitin

You have access to the Turnitin plagiarism detection tool to check your assignments. Generally, a Turnitin similarity score of 15-20% is deemed acceptable. Having too high a similarity score, while not meaning you have plagiarised, may mean you are relying too much on direct quotes or secondary sources. You can access Turnitin in the folder '4 Assignments and Turnitin plagiarism check' where you have to upload most of your assignments (as instructed) and use the Turnitin tool to check it for plagiarism. The Turnitin similarity report is then uploaded to the right folder in the ADAM workspace for the writing course together with your assignment. **Note that you must upload the Turnitin report, not the Turnitin receipt.** **Plan enough time so**

that the Turnitin report can be generated before the due date, as it could take up to 24 hours to generate.

Here are the **instructions**:

Go to the folder '4 Assignments and Turnitin plagiarism check'. Upload your assignments here to check for plagiarism by following these steps.

- First, click the 'Start/Launch' button. A new browser window will open.
- Here you upload the first draft of your assignment without any comments (before peer review).
- Make sure your name and the assignment details are on the document, for example '1John Smith'.
- Click to agree to submit the text to Turnitin.
- It takes some time for Turnitin to generate the similarity report.
- You can then see your Turnitin similarity score, as well as further details about sources used, etc.
- When it is shown on the Turnitin page that the report has been generated, download the report in PDF format using the buttons on the right. Name it according to the assignment number, for example 'XJohn Smith Turnitin report'
- Upload that report to the usual Scientific Writing ADAM Workspace into the folder 'Assignment XFinal draft'.

Use and declaration of resources to support your writing (e.g., assistance from other persons, texts, Artificial Intelligence, digital resources and text processing tools)

Principles and laws regarding intellectual property and academic integrity apply to this course. You must familiarise yourself with these principles and laws and sign a **declaration of intellectual integrity**. You are advised to write using your own words, sentence structure, expression, etc., so you can learn to write using appropriate style, and by learning from your own mistakes. If you use digital and artificial intelligence tools to improve your writing, it must be declared. You must declare each sentence for which you used artificial intelligence by highlighting the words/section/sentence in your text and writing a matching statement in the margin, such as:

- This sentence was translated using LEO / DeepL / Google translate, etc.
- This sentence was improved using DeepL Write/ Trinko / Grammarly, etc.

Read and submit this declaration of intellectual integrity (on ADAM, in the folder 1Course information...):

- All work submitted during the course is my own, unless declared otherwise.
- I have acknowledged all collaborations, and have properly used and cited all sources, such as texts and text processing tools.
- When using digital/Artificial Intelligence (AI)-supported writing tools, I have acknowledged them in full by highlighting the sections and declaring the sources in the margin, and by including a separate section "Overview of tools used", with their product name, my source of supply (e.g. URL) and information on the functions of the software used as well as the scope of use.
- In the preparation of assignments for this course, I have worked independently throughout and in a controlled manner in the use of digital/ AI-supported writing tools.

I hereby confirm that I accept these regulations and will only use resources and tools in ways that that are allowed.

Name and surname, signature, date and place

2. Instructions for the assignment review process

Look up whose work you review in the table below. Each time another student reviews your assignment, so that everyone has the opportunity to review a variety of assignments.

If your peer reviewer does not keep to the deadlines for uploading the reviewed texts, remind him/her directly. If the reviewer still fails to upload, contact me directly. Peer reviewing is part of the requirements for this course!

See the peer review schedule on the next page.

- By the due date, authors upload their **WORD-format** assignment for peer review to the folder entitled 'Assignment X First Draft' on ADAM, using the naming conventions explained on page 1. (Some assignments require upload to Padlet.)
- During Manuscript Clinics and in between classes, the reviewer reviews and makes suggestions for improving the assignment by makes comments (using 'Track changes'). **Reviewers write a short review paragraph such as in the example below** (summary, main recommendations, minor points). Thereafter, the reviewer uploads the assignment (with comments) to the ADAM folder entitled 'REVIEWED DRAFT' by the due date, naming it **X surname name reviewed by YOUR NAME**.
- Each writer then downloads his/her reviewed assignment from ADAM and makes changes as applicable before uploading the final version to the 'FINAL DRAFT' folder, adding 'final' to the document name (for example X Surname.Name final version).
- The lecturer corrects and comments on the assignments before uploading them to the 'TUTOR'S COMMENTS' folder, adding her initials to the document name. Read this version of your assignment before class, so that you can ask any questions you may have.
- Be rigorous about **adhering to due dates** in order not to delay the reviewing and marking process. Participating fully and timely in the peer review process is a requirement for receiving credits for the course.

Example of a short review paragraph: *In this paper, the author stresses the urgent need for preventive or therapeutic interventions against Ebola [= indicating a gap]. He/she then presents a novel compound that promises to block viral replication not only in Ebola, but in a range of related viruses [= filling the gap]. The results are described against the background or related current research, with common points indicated and differences clearly described. The author could be more specific about the impact of this research. How exactly could it impact public health or epidemiological research?*

3. Peer review schedule (Version 2 March 2025)

This schedule will be completed after the course registrations have closed, and before the first peer-reviewed assignment is due. **Note that this schedule might be adapted during the semester, so always ensure that you use the latest version.**

4. Assignment deadlines

Assignments that are not peer-reviewed	Assignment 1	Assignment 2	Portfolio
Only one draft	Monday 24.02.2025 07h00	Monday 03.03.25 07h00	Monday 16.06.2025 07h00

DUE DATES: Peer-reviewed assignments				
STEP	Assignment 3	Assignment 4	Assignment 5A/5B	Assignment 6A/6B
First draft	Monday 17.03.2025 07h00	Monday 31.03.25 07h00	Tuesday 22.04.2025 07h00	Monday 19.05.2025 07h00
Peer reviewed draft	Thursday 20.03.2025 12h00	Thursday 3.04.2025 12h00	Monday, 28.04.2025 07h00	Thursday 22.05.2025 12h00
Final draft	Monday 24.03.2025 07h00	Monday 07.04.2025 08h00	Friday, 02.05.2025 07h00	Monday 26.05.25 07h00

5. Assignments

5.1 Assignment 1: Class on 17 February 2025

Instructions for authors:

Write a 100-200-word text **in everyday spoken English** in which you:

- introduce yourself, your field of study, and the topic you are researching.
- justify why the topic and field are interesting and/or significant.
- use everyday language.
- do not copy and paste a text you have written for another purpose.

Upload this assignment to your column on the **Padlet page** of this course:

https://sz-unibas.padlet.org/RianaPaola_szunibas/h8j5bz89xcbdw9vg

Due date for upload to Padlet: Monday 24.02.2025, 07h00

Instructions for authors:

Assignment 2 (Two parts, A and B)

A. Choose 3 of the topic sentences below and develop each of them into a cohesive, coherent paragraph of about 100-120 words, making sure that the supporting sentences are well linked to the topic sentence and successive sentences.

- Adhere to the paragraph structure as presented and explored in the lecture (topic sentence that is developed in consecutive, linked body sentences).
- Use the techniques and linking words in the script and slides to improve cohesion and coherence.
- Reference all sources used in the text and in a short bibliography.
- Put your paragraph through the plagiarism check, Turnitin, on the ADAM page. Upload the Turnitin report too (not the receipt). (See instructions above.)

1. Primary Healthcare (PHC) is made up of three main areas: empowered people and communities; multisectoral policy and action; and primary care and essential public health functions as the core of integrated health services.
2. Apart from well-known tropical diseases, such as malaria, lesser-known diseases also require control and treatment.
3. Climate change is expected to negatively impact health and wellbeing in all countries of the world.
4. Diarrheal diseases account for 1 in 9 child deaths worldwide, making diarrhoea the second leading cause of death among children under the age of 5.
5. At the beginning of the 1980s, before HIV had been identified as the cause of AIDS, the infection was thought to only affect specific groups, such as gay men in developed countries and people who inject drugs.

- B.** Write a bullet-point checklist of at least 5 points to focus on when reviewing your peer's writing.

Upload this assignment in **WORD format** to the correct folder on **ADAM** by Monday 3 March at 07h00.

Then, choose your best short paragraph in your opinion and upload it to your column on the **Padlet** page of this course by the same due date.

5.3 Assignment 3 (Class on 3 March): this is the first peer-reviewed assignment

Instructions for authors:

This is a reviewed assignment: follow the review process and naming conventions as explained.

The use of Artificial Intelligence tools are NOT permitted for this assignment.

1. Paraphrase and summarize 3 paragraphs from epidemiological journal articles given in the script. The summary paraphrases should be about one third to half the length of the original paragraph, but contain the essential information found in the original text, stated in your own words.
2. Read 3 articles that will form part of your literature review. Record sources and make notes about the content. Make a literature synthesis table to record the sources. (See the example on the slides or below) OR Write a source list with 3 notes about each source. Examples are given below. This part of the assignment is **not** reviewed.
3. Review the paraphrase section of the assignment written by your review partner. Follow the review process, keeping to the due dates and following the assignment naming conventions.

This assignment does not have to go through Turnitin.

Due date for first draft upload (in WORD format) on ADAM: Monday 17 March at 07h00

Due date for reviewed version upload on ADAM: Thursday 20 March at 12h00

Final draft upload to ADAM: Monday 24 March at 07h00

Instructions for reviewers:

1. Remark on the correctness and conciseness of the summary paraphrases.
2. State which one of the summary paraphrases you found the best, and why.

This is an example of a literature synthesis table. Example of source notes are given below.

	Article #1	Article #2
Title	Irritable bowel syndrome subtypes: Clinical and psychological features body mass index and comorbidities	Anxiety and depression comorbidities in irritable bowel syndrome (IBS): a systematic review and meta-analysis
Source and Authors	Pubmed: Link (1) Guillaume Fond et al.	Pubmed: Link (2) Cristiane Kibune-Nagasako et al.
Key points	Three different subtypes of IBS and their frequencies in the population: IBS-Diarrhea (IBS-D), IBS-constipation (IBS-C), mixed IBS (IBS-M) Comorbidities associated with IBS: gastroesophageal reflux disease (GERD),	IBS (each subtype) is associated with a high prevalence of psychological disorders, like depression and anxiety

	functional dyspepsia (FD), chronic headache, fibromyalgia, obesity, anxiety and depression Anxiety and depression were found in 81.5% of the participants Which subtype associates with which comorbidities	The prevalence of those mental disorders is higher in IBS patients than in control groups (general population) The treatment of those mental disorders might ease the symptoms of the IBS
Common Points	1 and 2: Use of the same scoring system for the “diagnosis” of anxiety and depression -> HAD same cut off at 8 points	1 and 2: Use of the same scoring system for the “diagnosis” of anxiety and depression -> HAD(S) same cut off at 8 points
Conclusions	Small differences were found in the prevalence of anxiety and depression in the different subtypes Generally, you can conclude from the article that a disease resulting in a comorbid state of a patient leads to higher occurrence of anxiety and depression. Psychological factors contribute to poor outcomes of the disease, influencing the severity of the IBS symptoms	Especially the comorbidities anxiety and depression should be thoroughly checked and treated. The mental state seems to influence the symptom severity and persistence of IBS patients.

You could refer to these **examples of entries on a source list** for part 2 of the assignment: (However, you’re welcome to use a different format you prefer, such as the literature synthesis table above, or digital, columns, etc.)

Source 1

Source: Vernaz N, Calmy A, Hurst S, Jackson Y, Negro F, Perrier A, et al. A buyers' club to improve access to hepatitis C treatment for vulnerable populations. Swiss Med Wkly. 2018;148:w14649.

Summary:

- Even in Switzerland, hepatitis C treatment is not available to everyone because of its high cost and a higher prevalence in vulnerable populations, such as prisoners, immigrants, uninsured people and drug addicts.
- In order to improve access to this treatment, HUG (Hôpitaux universitaires de Genève) encourages the usage of buyers’ clubs. This is a legal alternative that does not disrupt the possible profit of pharmaceutical companies because these populations would not have sought care in the first place.

Article relevance:

- This article shows how to address a problem of treatment accessibility legally. However, it's highly dependent on the Swiss legal background.

Source 2

Figueroa, C., C. Johnson, N. Ford, A. Sands, S. Dalal, R. Meurant, I. Prat, K. Hatzold, W. Urassa and R. Baggaley (2018). "Reliability of HIV rapid diagnostic tests for self-testing compared with testing by health-care workers: a systematic review and meta-analysis." The Lancet HIV 5(6): e277-e290.

Notes:

- Systematic review including 25 studies in which HIV self-testing results were compared to testing results obtained by trained health care workers.
- Overall high agreement in results obtained by self-testing and testing by health care workers. Recommendation of authors: further facilitate the use of tests, for instance, with video instructions to overcome literacy barriers.
- Studies favoured use of oral fluid-based over blood-based rapid diagnostic test; blood-based tests have higher error potential stemming from incorrect use.

5.4 Assignment 4 (Class on Monday 24 March)

This is a reviewed assignment: follow the review process and naming conventions as explained.

Instructions for authors:

- Write 3 different versions of possible introductory sentences for your thesis/ proposal/ article. (See the lesson slides for ideas.)
- Write a 250-350-word **introduction section** to the manuscript (e.g., proposal, article, thesis) you plan to work on for the remainder of the course. Include the following elements, **highlighted** in **different colours** in your text, and **identified** in the margin.
- A suitable introduction statement
- A very brief summary of or reference to some relevant literature
- A statement defining the problem or gap in the research/literature
- Your research hypothesis or research questions, or the study goal(s).
- A statement or paragraph in which you show how you intend to fill the gap/niche in research.
- Reference all sources used in the text and in a short bibliography.
- Review a colleague's introduction section.
- Put your paragraph through the plagiarism check, Turnitin, on the ADAM workspace. Upload the Turnitin report too (not the receipt). Plan enough time so that the Turnitin report can be generated before the due date, as it could take up to 24 hours. (See instructions above.)

Due date for upload of first draft to ADAM: Monday, 31.03.2025 at 07h00

Due date for upload of reviewed version of assignment 4: Thursday, 03.04.2025, at 12h00

Due date for upload of final version: Monday 07.04.2025 at 08h00

In the next Manuscript Clinic on 7 April, you can discuss and work on this assignment with your peer reviewer. You can also work on any other part of your writing and discuss with your reviewer and the tutor how to improve it.

Instructions for peer reviewers: Your review should include a concise paragraph (3-4 sentences) in which you summarize the content of the reviewed work and give your opinion on whether the message conveyed was clear. Assess the following:

- How effective and descriptive are the introductory sentences? Would another format/type of statement have worked better? Make suggestions.
- How appropriately did the author use emphatic / highlighting language to make the centrality claim?
- How clear is the gap/problem statement? How could it be improved?
- How precise is the statement on how the author intends to fill this gap?

5.5 Assignments 5A Methods and 5B Results

Classes on Monday 31 March (Methods) and 14 April (Results)

This is a reviewed assignment: follow the review process and naming conventions as explained.

Choice of assignments: Submit EITHER 5A (Methods) OR 5B (Results)

Instructions for authors:

Assignment 5A:

Complete **all three** the following tasks:

1. Write down a **title** for your study in **three different formats**, as explored in this session. State which one you prefer.

2. Write a 200-300-word **Methods** section for your manuscript/article/proposal. Students who do not have methods sections yet, consider/envisage what their research methods might be and describe them or analyse methods sections in academic articles and write suitable phrases for this section. If your methodology is complicated and you need to use more words, you can do so.

Highlight the Moves included: Overview, research aims, questions or hypotheses, subjects and/or materials, location, procedure, limitations, data

3. Write **two acknowledgements** that should altogether be no longer than 50 words.

OR

Assignment 5B:

Complete **all three** the following tasks:

1. Write down a **title** for your study in **three different formats**, as explored in this session. State which one you prefer.

2. Write a 200-300-word **Results** section for your manuscript. Students who do not have results yet, consider/envisage what results they expect or hope to get from the research, and describe and discuss them. You may, if you wish, add figures and figure legends for support (These do not count towards the word limit, nor do they have to be reviewed).

Highlight the Moves included:

- Move 1: Starting point (where are we coming from?)
- Move 2: Describing the data
- Move 3: Summarizing the data

Incorporate effective linking devices (including summary nouns) to make your writing cohesive and coherent. These **linking sentences** as well as the **requirements in the above-mentioned bullet points** should be **highlighted** in your assignment.

3. Write **two acknowledgements** that should altogether be no longer than 50 words.

Reference all sources used in the text and in a short bibliography.

Put your assignment through the plagiarism check, Turnitin, on the ADAM workspace. Upload the Turnitin report too (not the receipt). (See instructions above.) Plan enough time so that the Turnitin report can be generated before the due date, as it could take up to 24 hours.

Assignments 5 A and 5 B share submission dates.

Due date for upload of 1st version to ADAM: Tuesday 22 April at 07h00

Due date for upload of reviewed version: Monday 28 April at 07h00

Due date for upload of revised final version: Friday, 2 May, at 07h00

Instructions for peer reviewers: Use the elements identified in class to write a short review paragraph of your colleague's work. Comment on the following:

Methods (5A):

- How descriptive and suitable are the titles?
- Are the methods described clearly enough so that one could replicate the study?
- Comment on the MOVES for the Methods section
- How appropriately did the author use guidance cues (e.g., purpose clauses, justification of methods...)? Describe/Elaborate.
- How did the author use purpose statements, time/temporal phrases and causal/connective phrases and linking devices such as sequencers? Highlight and name in a comment the use of these devices in your text.
- Are the acknowledgements clear and to the point?

Results (5B)

- How descriptive and suitable are the titles?
- How clear is the starting point of the results section?
- Comment on whether the author included the appropriate content and used the right language for this section. How did the author include appropriate guidance cues (e.g., purpose clauses, justification of methods...)?
- Has the author applied the 'new becomes given' principle to logically connect the different findings? Comment/Elaborate.
- How effectively did the author incorporate linking devices, such as summary nouns and linking words, to make the writing cohesive and coherent?
- Is the summary sentence clear and concise? Elaborate.
- Comment on the use of visual depiction of data (if included).
- Are the acknowledgements clear and to the point?

5.6 Assignments 6A (Discussion and Conclusion) and 6B (Abstract, title and acknowledgements)
Classes on Monday 28 April (Discussion and conclusion) and 12 May (Abstract)

This is a reviewed assignment: follow the review process and naming conventions as explained.

Choice of assignments: Submit EITHER 6A (Discussion) OR 6B (Abstract)

Instructions for authors:

Assignment 6A: Discussion and Conclusion

Write a 250-word Discussion & Conclusion section for your study/proposal. Students who do not have results yet, consider/envisage what results they hope to discuss, and describe them in a Discussion/Conclusion section (as for a proposal), or else as a section of a research article.

In the Interpretation/ Discussion section, interpret your results, while also giving justification for your interpretation and putting the results in the context of wider research. You could further synthesize the results in tables, graphs and illustrations.

In the Conclusion section, discuss the implications of the results of the study for future research and practice. In addition, outline limitations, and issues beyond the scope of the study.

Follow the six steps of Discussion and Conclusion (Busse and August, 2020) outlined on the slides and in the script.

Highlight the main results, justification, implications, limitations, issues beyond the scope of the study and the future outlook, as well as the use of hedging techniques and devices to increase cohesion in coherence in the text.

And/or

Assignment 6B: Abstract

Write an Abstract for a research article based on your research, or for a proposal. Include the various sections, writing cohesively and concisely. Word limit: 150-250 words.

Follow the review process.

You could do both Assignments 6A and 6B, but your reviewer only needs to review one of them. If the two of you agree to it, you could also review both assignments. The teacher only comments on one assignment. In the manuscript clinics you could ask questions on these or any other texts.

Reference all sources used in the text and in a short bibliography.

Put your assignment through the plagiarism check, Turnitin, on the ADAM workspace. Upload the Turnitin report too (not the receipt). (See instructions above.) Plan enough time so that the Turnitin report can be generated before the due date, as it could take up to 24 hours.

Assignments 6A and 6B share due dates. (See table above)

Instructions for peer reviewers of Assignment 6A – Discussion and Conclusion:

In the peer review, comment on how well the author...

- interpreted the results of the study and put them into the context of wider research.
- justified the interpretation.
- included graphic illustrations to synthesize the results.
- discussed the implications of the results for future research and practice.
- used hedging language.
- outlined issues beyond the scope of the study.

Complete 3-4 sections of the reviewer's section of the feedback grid.

Instructions for peer reviewers of assignment 6B – Abstract

Your review should include a concise paragraph (1-3 sentences) in which you summarize the content of the reviewed work. Assess the following:

- Is the Abstract introduction suitable and descriptive? Elaborate.
- How clearly is the gap indicated by the author?
- Is the author sufficiently clear on how they intend to fill this gap?
- Is the conclusion clearly linked to the gap statement?

Example of a reviewer's paragraph about the abstract: *In this abstract, the author stresses the urgent need for preventive or therapeutic interventions against Ebola [= indicating a gap]. He/she then presents a novel compound that promises to block viral replication not only in Ebola, but in a range of related viruses [= filling the gap]. Overall, the information given is easy to follow, and the level is suitable for a broad audience.*

Complete 3-4 sections of the reviewer's section of the feedback grid.

6. Portfolio of your writing

Upload a **portfolio** that consists of **ONE document in WORD format**, containing:

1. the **first, unreviewed version** of each assignment (no markup or comments) and
2. the **final improved version** of
3. each of the **FOUR reviewed assignments**,
4. without any reviewer's comments or markup, apart from your indications of the moves or steps required for the assignments.

Name the portfolio as follows: Surname name portfolio

Due date for portfolio upload: Monday 16 June at 07h00
