SCIENTIFIC WRITING – ASSIGNMENT 2

1. **The prevalence of obesity has increased worldwide in the past 50 years, reaching pandemic levels.** This rise in prevalence is mainly due to a shift towards sedentary lifestyles as well as increased consumption of less healthy foods [1]. Obesity, which is a complex chronic disease, occurs due to excessive fat deposits in the body and is a major risk factor for most health conditions such as cardio-vascular diseases [2]. Despite its severe health implications, obesity is both preventable and reversible. By individuals committing to consuming healthy diets as well as governments ensuring good policies are implemented to make healthier foods available, accessible and affordable, the burden of obesity can be reduced [3].
2. **Apart from well-known tropical diseases, such as malaria, lesser-known diseases also require control and treatment.** Admittedly, malaria is a major cause of morbidity and mortality in high-burden countries. The disease claims hundreds of thousands of lives globally every year leading loss of productivity and reduced socio-economic development in such countries [4]. While efforts are being made in implementing control strategies to reduce the burden and the possible elimination of malaria, other lesser-known diseases also contribute to the further exacerbation of the afore-mentioned effects. Despite the negative impact of these lesser-known diseases on human lives, several reasons contribute to their neglect - including lack of advocacy, lack of funding for their control, stigmatization, among others [5].
3. **Climate change is expected to negatively impact health and wellbeing in all countries of the world.** The far-reaching consequences of climate change cannot be denied as they are felt on multiple fronts such as the environment, agriculture, economy, human health, among others [6]. A report by the Intergovernmental Panel on Climate Change (IPCC) revealed that climate risks are spreading speedily and the impact will be severe than previously anticipated. This report also stated that developing countries would receive the hardest hit [7].
